

Prescribe

Business Requirements Documents (BRD)

1. Executive Summary

- Project Name: Prescribe - Prescription Management System
- Prepared By: Artemis
- Date: 1st March 2026
- Project Duration: 1 months (Development + Launch)
- Estimated Budget:

1.1 Business Case Study

Patients often lose physical prescriptions or struggle to maintain organized medical records. Doctors may lack access to a patient's past treatment history, leading to repetitive diagnostics or incomplete assessments. Prescribe solves this by creating a structured, digital ecosystem for medical record management.

1.2 Project Description

Prescribe is a secure, role-based web application designed to digitally store, organize, and manage patient prescriptions in a structured and accessible way. The platform bridges the gap between patients and doctors by providing categorized, centralized access to medical prescriptions

1.2 Expected Business Value

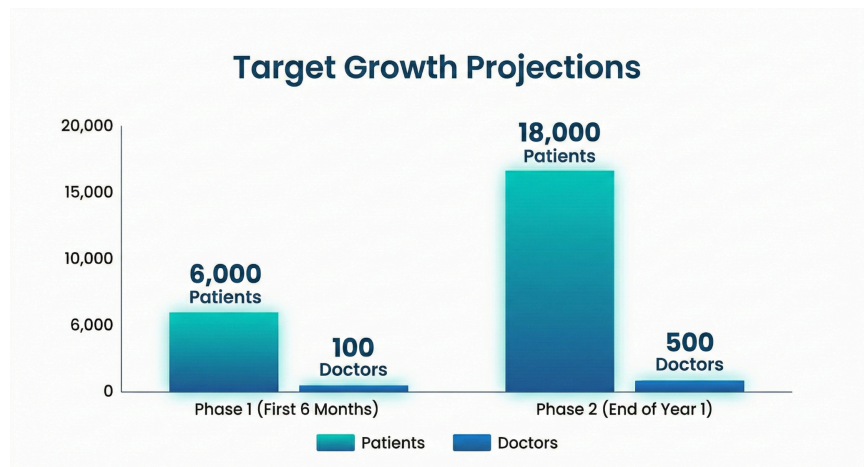

1.2.1 Target Growth Plan

Phase 1 (First 6 Months):

- 6,000 Patients
- 100 Doctors

Phase 2 (End of Year 1):

- 18,000 Patients
- 500 Doctors

These targets are based on initial penetration in urban and semi-urban healthcare markets with smartphone-enabled users.

1.2.2 Revenue Model

Model A: Freemium Subscription

- First 3 documents free
- ₹29 per month after 3 documents

Revenue Assumptions (Year 1 End):

- 18,000 registered patients
- 20 percent conversion to paid subscription
- 3,600 paid users
- ₹29 per month subscription fee

Projected Annual Revenue:

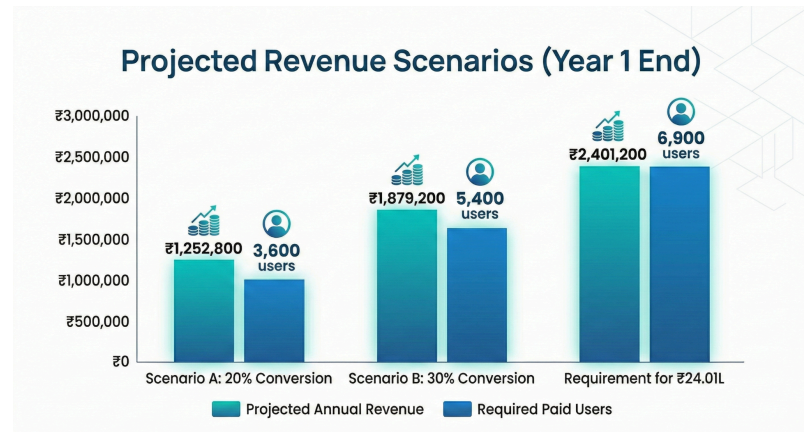

$$₹29 \times 3,600 \times 12 = ₹12,52,800 \text{ per annum}$$

If conversion improves to 30 percent:

$$₹29 \times 5,400 \times 12 = ₹18,79,200 \text{ per annum}$$

To achieve ₹24,01,200 annually,

approximately 6,900 paid users would be required.

1.2.3 Return on Investment (ROI)

Projected ROI: 300 percent over 3 years

The ROI projection is based on:

- Recurring subscription revenue model
- Low marginal cost per additional user
- Scalable cloud-based infrastructure
- Minimal physical operational overhead

2. Business Objectives

User Acquisition - Achieve 7,000 registered patients within 12 months of launch.

Active Usage - Maintain 60 percent Monthly Active Users (MAU) within the first year.

Document Volume - Achieve 3,60,000 medical documents uploaded within Year 1.
(Assuming an average of 20 documents per active user annually.)

Sharing Adoption - Ensure that at least 70 percent of users utilize the secure document sharing feature.

Security Reliability - Maintain zero critical data breach incidents.

3. Scope & Boundaries

IN SCOPE	OUT OF SCOPE
User authentication & role-based profiles	Native mobile applications (Android/iOS)
Unique Patient ID generation	Online appointment booking
Upload digital prescriptions	Chat or video consultation
Category-wise prescription storage	Online pharmacy/medicine ordering
View prescriptions by category	AI-based diagnosis
Doctor access via Patient ID search	Insurance claim processing
Dashboard for Patients and Doctors	Advanced analytics & reporting
Subscription logic	Multi-language support
Responsive web application	

4. Stakeholders

Project Sponsor	Artemis
Business Owners	Prescribe Management Team
Users	i. Patients. ii. Doctors.
Technical Teams	i. Development Team (Frontend & Backend). ii. Database Administrators. iii. Security Engineers.

5. Success Criteria
